Chunduru, Suryaprahbha FW: ref to rush sequence search for case # 09/603,665

David,

I Approve the Rush.

0

I am not exactly sure what Prabha means to search, but perhaps she means the 20-30 nucleotides overlapping each of the listed positions.

ref to rush sequence search for case # 09/603,665

Hi Jeff,

I request you to approve a rush sequence search for the above amended case. Oligomer search for sequences comprising positions 1694, 1854, 1967, 2017, 2050 of SEQ ID NO. 5. I resquest David Schreiber to perform the search.

thanks Suryaprabha Chunduru AU 1637, Room No. 2C29, Mail box 2C18 tel. # 272-0783.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

BARD1 can be used in the preparation of an anti-BARD1 antibody, and in the detection and purification of a BRCA1 protein. BARD1, B123, BE2, BE14, BE31 or BE445 can used in the identification of a binding protein agonist that alters the binding of BARD1, B123, BE2, BE14, BE31 or BE445 to BRCA1 or the biological activity of the BRCA1-BARD1,
                                                                                                                                                patient having or at risk of developing cancer
                                                                                                                                                           breast

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       र्
The present invention describes primer sets for synthesising 5602 full-CC length cDNAs defined in the specification. Where a primer set comprises: CC (a) an oligo-dT primer and an oligonucleotide complementary to the CC complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC omplementary strand of a polynucleotide which comprises a 5'-end CC sequence and an oligonucleotide comprising a sequence, where the CC oligonucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the CC specification. The primer sets can be used in antisense therapy and in CC gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

### ARESULT 1 ARMYS 4099 ID ARMYS 4099 ID ARMYS 4099 AC ARMYS 2000 20-SEP-1996; 03-APR-1997; 04-APR-1997; W09812327-A2. BARD1; ring protein; BRCA1; breast cancer; risk; diagnosis. AAW54099; 19-SEP-1997; 26-MAR-1998. Homo sapiens Homo sapiens BAP28 sequence 28-SEP-1998 AAW54099 standard; protein; (first 96US-0025296P. 97US-0042611P. 97US-0042985P. 97WO-US016842 entry) ξ

The sequence is that of a protein which can be used in the preparation of the recombinant breast cancer antigen, BRCA1, binding proteins BARD1, B123, BE2, BE14, BB31 or BE445, or a composition for the detection of a BARD1, B123, BE2, BE14, BB31 or BE445 nucleic acid sequence, specifically a wild type BARD1 composition for the detection or purification of BRCA1, useful to identify a patient having, or at risk of developing cancer. BARD1 can be used in the preparation of an anti-BARD1 antibody, and in the detection and purification of a BRCA1 protein. BARD1, B123, BE2, BE14, BE31 or BE445 can used in the identification of a binding protein agonist or antagonist that alters the binding of BARD1, B123, BE2, BE14, BE31 or BE445 to BRCA1 or the biological activity of the BRCA1-BARD1,

DNA sequence encoding BARD1, B123, BE2, BE14, BE31 or BE445 - which as breast cancer antigen, BRCA1, binding proteins are useful to identify patient having or at risk of developing cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ពន្ធព្ធន្ធន្ធ
The present invention describes primer sets for synthesising 5602 full-
clength cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the
complementary strand of a polynucleotide which comprises one of the 5602
cnucleotide sequences defined in the specification, where the
coligonucleotide comprises at least 15 nucleotides; or (b) a combination
cof an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a sequence, where the
complementary to a
complementary strand of a polynucleotide which comprises and the combination of
complementary strand of a polynucleotide which comprises and the combination of
complementary strand of sequence is selected from those defined in the
specification. The primer sets can be used in antisense therapy and in
complementary strand of the abnormality of the proteins encoded by
complementary strand of the primers allow obtaining of the full-length
complementary to the primers allow obtaining of the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  29-JUL-1999;

The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein of the invention.

Sequence 1149

New polynucleotides, useful for expressing recombinant proteins analysis, characterization or therapeutic use, or as markers for which the corresponding protein is preferentially expressed.

for tissues

DNA sequence encoding BARD1, B123, BE2, BE14, BE31 breast cancer antigen, BRCA1, binding proteins are patient having or at risk of developing cancer. 1123, BE2, BE14, BE31 or BB445 - which as binding proteins are useful to identify

WPI; 1998-230317/20. N-PSDB; AAV24135.

Disclosure; Page 287-288; 348pp; English.

The sequence is that of a protein which can be used in the preparation of the recombinant breast cancer antigen, BRCA1, binding proteins BARD1, B123, BE2, BE14, BE31 or BE445, or a composition for the detection of a BARD1, B123, BE2, BE14, BE31 or BE445 nucleic acid sequence, specifically a wild type BARD1 composition for the detection or purification of BRCA1, useful to identify a patient having, or at risk of developing cancer. BARD1 can be used in the preparation of an anti-BARD1 antibody, and in the detection and purification of a BRCA1 protein. BARD1, B123, BE2, BE14, BE31 or BE445 can used in the identification of a binding protein agonist or antagonist that alters the binding of BARD1, B123, BE2, BE14, BE31 or BE445 to BRCA1 or the biological activity of the mochi-mach

         The present invention describes primer sets for synthesising 5602 full-CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 cc mucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises as sequence complementary to the CC omplementary strand of a polynucleotide which comprises a 5'-end cc gequence and an oligonucleotide comprising a sequence complementary to a composition of cc sequence comprises a 1'-end sequence complementary to a cc polynucleotide which comprises a 1'-end sequence, where the cc pecification. The primers are useful for matisense therapy and in cc gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the comprise and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also the the fill-length cDNAs. The primers are also the condition of the fill-length cDNAs. The primers also the condition of the fill-length cDNAs. The primers also the condition of the fill-length cDNAs. The primers also the condition of the fill-length cDNAs. The primers also the condition of the condition of the fill-length cDNAs. The primers also the condition of the condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          B123, BE2, BE14, BE31 or BE445 complex. The antibodies can be used detect BARD1, B123, BE2, BE14, BE31 or BE445, a specific anti-BARD1 antibody can be used to identify a patient having or at risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 515 AA;

RT,

New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tin which the corresponding protein is preferentially expressed.

tissues

N-PSDB; ADE07101.

2003-569235/53.

Claim 20; SEQ ID NO 1078; 1177pp; English.

The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein

full-length cDNAs. The primers allow

obtaining of the full-length

The sequence is that of a protein which can be used in the preparation of the recombinant breast cancer antigen, BRCA1, binding proteins BARD1, B123, BE2, BE14, BE31 or BE445, or a composition for the detection of a BARD1, B123, BE2, BE14, BE31 or BE445 nucleic acid sequence, specifically a wild type BARD1 composition for the detection or purification of BRCA1, useful to identify a patient having, or at risk of developing cancer. BARD1 can be used in the preparation of an anti-BARD1 antibody, and in the detection and purification of a BRCA1 protein. BARD1, B123, BE2, BE14, BE31 or BE445 can used in the identification of a binding protein agonist or antagonist that alters the binding of BARD1, B123, BE2, BE14, BE31 or BE445 to BRCA1 or the biological activity of the BRCA1-BARD1,

The present invention describes primer sets for synthesising 5602 full-
calculation of the specification. Where a primer set comprises:
calculation of the specification of the set comprises:
calculation of primer and an oligonucleotide complementary to the
calculation sequences defined in the specification, where the
calculation of a polynucleotide sequence complementary to the
calculation of a polynucleotide sequence complementary to the
calculation of a polynucleotide which comprises a 5'-end
calculation of a polynucleotide which comprises a 5'-end
calculation of a polynucleotide comprises a 5'-end
calculation of a polynucleotide comprises a 5'-end
calculation of a polynucleotide comprises a 5'-end
calculation of sequence is sequence, where the
calculation of sequence is sequence is selected from those defined in the
calculation. The primer sets can be used in antisense therapy and in
calculation of the sprimers are useful for synthesising polynucleotides,
calculation of the sprimers are useful for synthesising polynucleotides,
calculation and/or diagnosis of the abnormality of the proteins encoded by
chastinian and/or management and allow obtaining the proteins encoded by

                   proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents
                                                                                                                                                                                                                                Ghosh
Ma Y,
                                                                                                                                                New polynucleotides, useful for expressing recombinant proteins analysis, characterization or therapeutic use, or as markers for in which the corresponding protein is preferentially expressed.

                                                                                                                                                                                                  sequences and regulatory region located at the 3 and 5 ends of the BAP28 coding region. The BAP28 polypeptides can be expressed by standard recombinant methodology. BAP28 polymuclectides and polypeptides have been found to be over expressed in prostate tumour cells, therefore levels of BAP28 expression and/or activity may be assayed (e.g. by polymerase chain reaction (PCR)) to diagnose patient suffering from or susceptible to prostate cancer. Antibodies specific for the BAP28 polypeptides are useful as diagnostic reagents. Biallatic markers of the BAP28 gene are useful in genetic analysis. The present sequence represents a protein encoded by a first CDNA sequence of the BAP28 gene consisting of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New BAP28 polynucleotides and polypeptides overexpressed in prostate cancer cells for diagnosing prostate tumors, e.g. by hybridization or polymerase chain reaction assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention is directed to BAP28 polypeptides, BAP28 polynucleotide sequences and regulatory region located at the 3^{\prime} and 5^{\prime} ends of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Barry C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     25-JUN-1999; 99US-0141323P.

                                                                                Query Match
                                                                                                                                                                 barley (Hordeum vulgare) which contain single nucleotide polymorphisms (SNP). The oligonucleotides may be used for analysis of SNPs among barley varieties, identification of particular varieties and genotype-phenotype analysis, isolation of specific genes and creation of new varieties by transformation of barley varieties with them and production of new barley varieties with desired properties. The present sequence represents an oligonucleotide clone sequence featured in the specification. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO specification, but was obtained in electronic format directly from WIPO
                                                                                                             Sequence 118 AA;
                                                                                                                                                                                                                                                                                                                                                                       Single nucleotide polymorphism sites in barley varieties and DNA sequences containing them for analysis and identification of barley varieties and production of barley transformants with desired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20-DEC-2001; 2001JP-00387059

                                                                                                                                                                                                 AAE13001;
                                                                                                                                                                                                                      AAE13001 standard;
                                                                                                                                                                                                                                                                                                                                                                         Sequence 650 AA;
                                                                                                                                                                                                                                                                                                                                                                                         The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful preparing a vaccine composition against Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polyadenylated RNA-binding protein or eukaryotic translation initiation factor-4 (eIF-4) gamma. The nucleic acid fragments may be used in PCR protocols to amplify longer nucleic acid fragments encoding homologous genes from DNA or RNA, to create transgenic plants in which the new polypeptides are present at higher or lower levels than normal or in cell types or developmental stages in which they are not normally found. The nucleic acids may also be used as probes for genetic or physical mapping the genes that they are part of and as makers for traits linked to those genes. The polypeptides may be used to produce antibodies and as targets to facilitate design and/or identification of inhibitors of those enzymes that can be used as herbicides. The present sequence is rice poly (A) binding protein from clone rsr9n.pk005.117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; nootropic; neuroprotective; cytostatic; dermatological;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           isolated from a range of human tissues disclosed in the specification. The nucleic acide, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune constructs, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, cancer and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing (e) neurological disease such as myocardial ischaemias; (d) wound healing (infectious diseases such as viral, bacterial, fungal and parasitic infectious. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

    The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in all of the printed specification, but was obtained in all of the printed specification, but was obtained in all of the printed specification, but was obtained in all of the printed specification, but was obtained in all of the printed specification, but was obtained in all of the printed specification, but was obtained acid probe that the probability of the printed specification, but was obtained acid probe that the probability of the printed specification, but was obtained acid probe the probability of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             04-FEB-2000;

                                                                      Sequence 36
                                                                                     The present invention relates to single exon nucleic acid probes (see AAI31315-AAI57546). The present sequence is a peptide encoded be such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples defrom human placenta. The probes are useful for antenatal diagnosis human genetic disorders

                                                                                                                                                                                                                                                                                                                                                   The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                              Human brain expressed single exon probe encoded protein SEQ ID NO: 33384.
                                                                                                                                                                                                                                                                                                                              Sequence 36
                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 4; SEQ ID NO 34308; 658pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  19-AUG-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABG43897 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human niver single exon encoded peptides of the invention. Note: The sequence but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

mucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12397 open reading frames derived from the 12614 probes. Also included are a microarray comprising the movel set of probes derived from human lung, comprising the movel set of probes collection of detectably labeled nucleic acids derived from human lung, comprising (a) contracting the array with a collection of detectably labeled nucleic acids derived from human lung measuring gene expression in a sample company, and (b) measuring the label detectably bound to each probe of the carray; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eakaryotic; and (b) detecting specific bybridisation of detectably labeled nucleic acids from eukaryote lung mkNA, to a single exon probe, and the above mentioned microarray; assigning exons to a single exon probe, and the above mentioned microarray; assigning exons to a single exon probe, and the above mentioned microarray; assigning exons to a single exon comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several cissues and/or cell types using hybridisation to a single exon comprising exons and/or cell types indicates that the exons should be assigned to a single gene, particularly using human continuity sequences, mentioned in the specification, or encoded by the exons should be assigned to a single gene, particularly using human continuity derived mRNA and for the study of lung disease such as asthma, lung disease (ILD), familial idiopathic pulmonary haemosiderosis, neurofibromatosis, pulmonary hypertensis, pulmonary protesing, pulmonary sequences, particularly using human contents. Pulmonary hypertensis, pulmonary sequences, particularly decomprises, pulmonary hypertensis, pulmonary cont

                                                                     Query Match 14.6%; Score 6; DB 5; Best Local Similarity 100.0%; Pred. No. 65; Matches 6; Conservative 0; Mismatches
                                                                                                                                                                     The invention describes an isolated human nucleic acid (I) encoding any of 120 10-153 residue amino acid sequences (S1), given in the specification, comprising any of 164 179-12421 base pair sequences (S2), given in the specification. The methods and compositions of the present invention are useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung. They are also used for identifying lung tissue, monitoring and identifying and/or designing antagonists of the polypeptide of the invention, gene therapy, production of transgenic animals and production of engineered lung tissue for treatment and research. This is the amino acid sequence of a lung specific nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated human nucleic acid molecule and polypeptide, useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung.

Disclosure; Page 287-288; 348pp; English.

DNA sequence encoding BARD1, B123, BE2, BE14, BE31 or BE445 - which as breast cancer antigen, BRCA1, binding proteins are useful to identify patient having or at risk of developing cancer.

N-PSDB; AAV24135. WPI; 1998-230317/20.

agonist or antagonist that alters the binding or μακύι, μιζί, μεζί, με BE31 or BE445 to BRCA1 or the biological activity of the BRCA1-BARD1,

The present invention describes primer sets for synthesising 5602 full—CC (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 CC complementary strand of a polynucleotide which comprises one of the 5602 CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC complementary strand of a polynucleotide which comprises at 5 end CC sequence and an oligonucleotide comprising a sequence complementary to the CC sequence and an oligonucleotide comprising a sequence complementary to a combination CC complementary strand of a polynucleotide which comprises a 5 end sequence, where the CC polynucleotide which comprises a 3 end sequence, where the CC polynucleotide which comprises a 3 end sequence, where the CC specification. The primers set can be used in antisense therapy and in the CC gene therapy. The primers set useful for synthesising polynucleotides, can be used in antisense therapy and in CC gene therapy full-length cDNAs. The primers are also useful for the particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers also useful for the full-length cDNAs. The primers also useful for the complementary com
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 2

                     The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein of the invention.
                                                                                                                                                                                                                                  Ghosh
Ma Y,

                                                                                                                                                      The invention is directed to BAP28 polypeptides, BAP28 polynucleotide sequences and regulatory region located at the 3' and 5' ends of the BAP28 coding region. The BAP28 polypeptides can be expressed by standard recombinant methodology. BAP28 polymucleotides and polypeptides have been found to be over expressed in prostate tumour cells, therefore levels of BAP28 expression and/or activity may be assayed (e.g. by polymerase chain reaction (PCR)) to diagnose patient suffering from or susceptible to prostate cancer. Antibodies specific for the BAP28 polypeptides are useful as diagnostic reagents. Biallelic markers of the BAP28 gene are useful in genetic analysis. The present sequence represents a protein encoded by a first cDNA sequence of the BAP28 gene consisting of the exons 1 to 45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New BAP28 polynucleotides and polypeptides overexpressed in prostate cancer cells for diagnosing prostate tumors, e.g. by hybridization or polymerase chain reaction assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           25-JUN-1999; 99US-0141323P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 411

Pseudomonas syringae

WO200277183-A2

```
The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits promiter operably linked to the nucleic acid comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated cc nucleic acid; (4) an antibody capable of specifically binding cantisense nucleic acid; (4) an antibody capable of specifically binding polypeptide; (5) producing the polypeptide; (6) inhibited by the cc proliferation or the activity of a gene in an operor required for proliferation, or that this influences the activity of identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway considered for proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation, or that inhibits proliferation or the biological corganism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the extent strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation of compound that inhibits of compound that inhibits of compound that inhibits in which the extent strains; or constitution to isolate candidate molecules for rational constituted for proliferation in cells other than S. aureus, S. typhimurium, C. auteur for proliferation in cells other than S. aureus, S. typhimurium, constituted for proliferation in cells other than S. aureus, S. typhimurium, constituted for proliferation in cells other than S. aureus, S. typhimurium, constituted for proliferation to isolate candidate molecules for rational constitution of the carget prokary the constitution of the printed spe

The invention relates to the isolation of genes and their encoded CC proteins from Photorhabdus luminescens. The isolated sequences are CC sources of probes and primers for detecting the genome of P. luminescens CC and related species; to study polymorphisms; for gene analysis and for CC detection/amplification of the genes. Antibodies (Ab) raised against the polymprophisms proteins, Ab and cells that CC carry a gene-containing vector are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that CC modulate, regulate, induce or inhibit expression of the genes in plants, response or microorganisms other than P. luminescens and are able to alter compounds that the compounds or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. CC luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and cells that CC genes, proteins, vectors containing the genes and Ab are also useful therefore, proteins, vectors containing the genes and are also useful thereses, proteins, vectors containing the genes and are also useful thereses, proteins, vectors containing the genes and have also useful that are sensitive to P. luminescens encoded toxins or antibiotics) and as CC biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. CC luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polynucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis

                                                                                                                                                                                                                                                                                                                                                                                                                                       K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published not format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 473 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention

                                                                                                                        Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to new Proteus mirabilis polypeptides and polypucleotides. The invention also relates to antibodies against the polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polymucleotides are useful as molecular resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                        cc length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the
cc complementary strand of a polynucleotide which comprises one of the 5602

cc oligonucleotide sequences defined in the specification, where the
cc oligonucleotide comprises at least 15 nucleotides; or (b) a combination
cc of an oligonucleotide comprising a sequence complementary to the
cc complementary strand of a polynucleotide which comprises a 5'-end
cc sequence and an oligonucleotide comprising a sequence complementary to a
cc polynucleotide which comprises a 3'-end sequence, where the
cc oligonucleotide which comprises a 3'-end sequence, where the
cc oligonucleotide comprises at least 15 nucleotides and the combination of
cc the 5'-end sequence/3'-end sequence is selected from those defined in the
cc specification. The primers sets can be used in antisense therapy and in
cc gene therapy. The primers are useful for synthesising polynucleotides,
cc detection and/or diagnosis of the abnormality of the proteins encoded by
cthe full-length cDNAs. The primers are also useful for the
cc detection and/or diagnosis of the abnormality of the proteins encoded by
cthe full-length cDNAs. The primers allow obtaining of the full-length
cc DNAs easily without any specialised methods. AAB03166 to AAB13632 and
cc AAB13633 to AAB13642 represent human cDNA sequences; AAB92446 to AAB3893
cc crigonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     27-AUG-199;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                         AAY49137-Y49152 are amino acid sequences that are fragments of choline CCC binding proteins (CBP). The fragments of the protein are the alpha helix CC forming parts of the CBPs from Streptococcus pneumoniae. The polypeptides cCC do not contain the actual choline binding fragment. The polypeptides and the invention, which relates to polypeptide truncates of a pneumococcal curface binding protein containing the highly conserved immunogenic alpha helical portion and no choline binding portion. The polypeptides are used as immunogens in a bacterial vaccine. The vaccine can be used for preventing (immunising) or treating invasive bacterial (especially correventing (immunising) or treating invasive bacterial (caused by pneumococcal) infections, especially obtits media (caused by CAntibodies raised against the polypeptide are useful for detection.

CC prevention (passive immunity) and treatment of S. pneumoniae infections. The vaccine are especially useful in immunocompromised patients, those with an immature immune system, or patients with an on going pneumococcal infection. The vaccine avoids unnecessary expense and provides broad content of supressive and trange of pneumococcal serotypes and it produces an improved and enhanced effect in preventing bacterial infections

DNA sequence encoding BARD1, B123, BE2, BE14, BE31 or BE445 - which as breast cancer antigen, BRCA1, binding proteins are useful to identify patient having or at risk of developing cancer.

The sequence is that of a protein which can be used in the preparation of the recombinant breast cancer antigen, BRCA1, binding proteins BARD1, B123, BE2, BE14, BE31 or BE445, or a composition for the detection of a BARD1, B123, BE2, BB14, BB31 or BE445 mucleic acid sequence, specifically a wild type BARD1 composition for the detection or purification of BRCA1, useful to identify a patient having, or at risk of developing cancer. BARD1 can be used in the preparation of an anti-BARD1 antibody, and in the detection and purification of a BRCA1 protein. BARD1, B123, BE2, BE14, BE31 or BE445 can used in the identification of a BRD1, B123, BE2, BE14, BE31 or BE445 can used in the identification of BARD1, B123, BE2, BE14, BE31 or BE445 to BRCA1 or the biological activity of the BRCA1-BARD1,

```
(2) (a) an oligo-off primer and an oligonucleotide complementary to the Complementary strand of a polynucleotide which comprises one of the 5602 mucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 mucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end combination CC sequence and an oligonucleotide comprising a sequence, where the CC oligonucleotide which comprises a 3'-end sequence, where the CC oligonucleotide which comprises a 3'-end sequence, where the CC oligonucleotide which comprises a 1'-end sequence, where the CC oligonucleotide comprises at least 15 mucleotides and the combination of CC oligonucleotide which comprises at least 15 mucleotides and the combination of CC oligonucleotide comprises at least 15 mucleotides and the combination of CC gene therapy. The primer sets can be used in antisense therapy and in the CC gene therapy. The primer sets can be used in antisense therapy and in the CC gene therapy full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 2

                                                                  The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ghosh
Ma Y,
                                                                                                                                                                                                                                                                                                             New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for ti in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                             Claim 20;
                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2003-569235/53.

                                                                                                                                                     The invention is directed to BAP28 polypeptides, BAP28 polynucleotide sequences and regulatory region located at the 3' and 5' ends of the BAP28 coding region. The BAP28 polynucleotides can be expressed by standard recombinant methodology. BAP28 polynucleotides and polypeptides have been found to be over expressed in prostate tumour cells, therefore levels of BAP28 expression and/or activity may be assayed (e.g. by polymerase chain reaction (PCR)) to diagnose patient suffering from or susceptible to prostate cancer. Antibodies specific for the BAP28 polypeptides are useful as diagnostic reagents. Biallelic markers of the BAP28 gene are useful in genetic analysis. The present sequence represents a protein encoded by a first CDNA sequence of the BAP28 gene consisting of the exons 1 to 45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New BAP28 polynucleotides and polypeptides overexpressed in prostate cancer cells for diagnosing prostate tumors, e.g. by hybridization oppolymerase chain reaction assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Barry C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB85029 standard; protein; 2144 AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The specification describes a method for the identification or detection of a microbe, using the gyrase gene as the index. The method involves the use of PCR primers to amplify DNA from the microbe, which is then identified or detected depending on its base sequence. The method can be used to classify and identify an unidentified microbe strain rapidly and with high precision. The present sequence represents a gyrase protein. The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and theses. Note: The sequence data for this patent is based on equivalent patent W0200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABP60399;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at services and the patent of the printed sequences are the sequences of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                           (STAD ) AMOCO CORP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABP60399 standard; protein; 1045 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 587 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seqdata.uspto.gov/sequence.html

CC accumulation in yeast comprising increasing the expression level of a
CC structural gene encoding a polypeptide having HMG-CoA reductase activity
CC in a mutant yeast having defects in the expression of zymosterol-24-
CC (B) a method of increasing squalene, ergosta-8, 22-dienol, ergosta-8-enol and ergosta-7-enol accumulation in S. cerevisiae
CC comprising transforming a mutant S.cerevisiae having a defect in the
CC expression of episterol-5-dehydrogenase with a recombinant DNA molecule
CC comprising a vector operatively linked to an exogenous DNA segment that
CC enzyme and a promoter suitable for driving the expression of the
CC enzyme and a promoter suitable for driving the expression of the
CC zymosterol-24-methyl transferase and episterol-5-dehydrogenase with a
CC cerevisiae comprising
CC risholesta-7, 24-dienol accumulation in S. cerevisiae comprising
CC raductase in the yeast, (C) a method of increasing squalene, Zymosterol
CC zymosterol. 4-methyl transferase and episterol-5-dehydrogenase with a
CC cerevisiae having a defect in the expression of
CC cumulation in S. cerevisiae comprising transforming a mutant S.
Ccerevisiae having a defect in the expression of
CC mutant S. cerevisiae comprising transforming a mutant S.
Ccerevisiae having defects in the expression of zymosterol-24-
methyl transferase and ergosta-5, 7, 24(28)-trienol-32-dehydrogenase
CC enzymes, which mutant is designated ATCO402mm; (F) a mutant of S.
CC cerevisiae having single or double defects in the expression of enzymes
CC enzymes the conversion of squalene to expression of the
CC carevisiae having single or double defects in the expression of enzymes
CC enzymes the conversion of squalene to expression of the
CC carevisiae having single or double defects in the expression of enzymes
CC enzymes the conversion of squalene to expression of that of the
CC constance the conversion of squalene to expression of that of the
CC conversion of squalene to expression of that of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
